

Trade report 03.07.2017 - 09.07.2017

We observed Bitcoin exiting correction territory for short-terms during the previous trading week. Meanwhile Litecoin-related forecasts also scored. We successfully traded other altcoins as well. The current period is not the simplest for crypto currencies market because of Segwit implementation and the fact that July is traditionally not the most successful month for trading. But even in this situation we continue demonstrating stable results with a total profitability of about 2-3% per day.

Concerning BTC / USD pair, we continue trading within the corridor. We expect a drop to USD 1,800 for 1 bitcoin. It can happen. That's why we plan putting buy orders covering this range.

Concerning other pairs of cheap altcoins, we perform trading with short transactions. These crypto-currencies (such as Digibyte and Decred) are heavily overbought. We expect NEM to drop below USD 5 relatively soon, while siacoin will drop to about 200-250 satosh. We will buy ethereum when it falls below USD 200.
