#### COMPARISON WITH OTHER MARKETS

**Earn.World** has outperformed the precious metals market, with a growth rate of 6.94% compared to the growth of 3.21% for Silver and 3.80% for Gold.

We have also surpassed renowned market indexes like the CCI30 (Cryptocurrencies Index 30) and DJI (Dow Jones Industrial Average Index), achieving a remarkable 6.94% return compared to 3.78% and 4.80% respectively.

Our success is due to the diligent research, cutting-edge strategies, and dedication to maximizing returns.

#### **OUR ANALYSIS**

Binance launched in Japan with 34 tokens, with BNB debuting in Japan. It is expected that the number of BNB users will grow, as will the number of investors holding BNB, resulting in a rise in the price of BNB.

**BNB** 

LINK

Chainlink launched its Interoperability Protocol to connect Blockchains to Bank Chains. This marks the introduction of a standard that might link all bank chains and blockchains in general. The collaboration between the protocol and SWIFT, a closed network used by banks to conduct international money transfers, has been made possible in large part by the interoperability protocol. Several financial organizations will be tested by Chainlink and Swift's connections to blockchain networks. This is expected to give LINK an upside in price.

#### **OUR ANALYSIS**

MATIC

The future of Polygon as the second-largest gaming chain seems bright. It registered 138,081 dUAW, a substantial 53% increase, in total. Traders are optimistic about the price of MATIC due to Polygon's commitment to ecosystem growth and its role as the first to introduce a zkEVM.

Investor confidence in the conclusion of the SEC action has steadily increased. Decision projections range from July to September, with significant upsurge potential if the decision is favorable. Additionally, XRP has been added to the HKVAC index, enhancing its credibility.

It is most likely that the BlackRock Bitcoin ETF will be approved. However, approval is almost certain given Blackrock's nearly flawless track record of obtaining them. This action is anticipated to be the most encouraging development for cryptocurrencies in recent memory, creating significant upside potential. Furthermore, the Fed's hints that the liquidity crunch will end are anticipated to raise prices.

**BTC** 

#### **OUR ANALYSIS**

The price of Ethereum is anticipated to increase as a result of the acceptance of the Bitcoin ETF. Since Ethereum's price has been consolidating around the \$1800–\$1900 range for a while, any favorable news could cause a significant upward rise.

ETH

**ADA** 

Cardano TVL reached a new year high of more than \$200 million on July 14 amid rising DeFI activity. The market cap for Cardano's ADA has also seen significant growth. Between July 13 and 14, ADA received an inflow of \$2.10 billion, elevating its market cap from \$10.11 billion to \$12.89 billion, with the token surging 15%.
